Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II. Catalytic component c MPF (By similarity).

SUBUNIT: Forms a stable but non-covalent complex with cyclin B ir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mature oocytes (By similarity).

Claim 32; Page 265; 284pp; English.

New crystal of protein kinase B beta, useful for activating protein kinases, e.g. AGC kinases, comprises three-dimensional atomic coordinates or a tetragonal space group.

The present invention describes a crystal of protein kinase B beta (PKBbeta) comprising (1), where (1) comprises: (a) a tetragonal space

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      motif common to several substrates of the enzyme within a genome; (5) profiling protein levels or post-translation modifications in a cell or tissue on a genome wide scale; (6) profiling drug-induced changes in protein levels or post-translation modifications in a cell or tissue on a genome wide scale. The motif is selected from single phosphothreonine, a single phosphoserine, a single phosphoserine, a single phosphoserine, a single phosphoserine and a single nitrotyrosine, and comprises all or part of kinase consensus substrate motif or a protein binding motif. This is the amino acid sequence of a peptide used in the creation of a motif-specific, context-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   independent antibody (I) that recognises several peptides or proteins within the genome that contain motifs. The method is useful for: (1) identifying an unknown substrate of an enzyme, which involves generating at least one (I) which recognizes a motif common to several substrate of the enzyme with a genome; (2) detecting the modification state of a target substrate that contains a motif common to several substrates of an enzyme within a genome; (3) screening a drug for the inhibition or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antidiabetic; cardiant; cytostatic; cerebroprotective; vasotropic; anorectic; protein kinase modulator; cancer; diabetes; obesity; apoptosis inhibition; ischaemia disease; stroke; myocardial infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            phosphoinositide dependent protein kinase 1; PDK1; molecular modelling; protein kinase; catalytic domain; enzyme; hydrophobic pocket; insulin signalling pathway; signalling; crystalline form; protein co-ordinate data; three-dimensional structure; antifungal;

CC described: (1) selecting or designing (M2) a compound for modulating the CC kinase having a hydrophobic pocket (PIF binding pocket) containing protein CC kinase having a hydrophobic pocket in the position equivalent to the hydrophobic pocket of human PDK1 that is defined by residues including CC hydrophobic pocket of human PDK1 that is defined by residues including CC PDK1 and further having a phosphate binding pocket in the position CC equivalent to the phosphate binding pocket of human PDK1 that is defined by residues including Lys76, Arg131, Thr148 and/or Gln150; (2) assessing CC (M3) the activation state of a structure for a protein kinase; (3) a CC mutated protein kinase (I); (4) a polymucleotide (II) encoding (I); (5) a CC modulates the protein kinase activity of a protein kinase (e.g., PDK1); (CC (7) an antibody (IV) reactive with PDK1 or (I) but not with the protein kinase (B); (C) an antibody (IV) reactive with PDK1 or (I) but not with the protein kinase activity of a protein kinase (B) a CC mompound (V) identified or identifiable by (M1) or (M3); (9) use of (V), (I), (II) in medicine; (I0) use of (V), (I), (II) for the manufacture of a medicament for the treatment of a patient in need of modulation of CC signalling by a protein kinase as defined, for example PDK1, SGK, PKB, or PDK1, PDK2/SGK/PKB/p70 S6 kinase/PRK2/PKC signalling; and (II) a CC crystalline form (V) is useful for modulating the ability of protein cativities, and can be used as a modulator of CC portion kinase. (V) is useful for modulating the ability of protein kinase. The protein structures e.g., the co-cordinates as norvided in the snearlification are useful for designing. ordinates as provided in the specification are useful for designing reagent useful in drug designing assays or characterisation of protein kinase activity or regulation. (V) capable of producing the activity of PKC, e.g., PKC beta, PKK1 or PK2, PDK1, PKB, SGK or P70 S6 kinase, is useful in treating cancer. (V) capable of increasing the activity of PDK1, PKB, SGK or P70 S6 kinase is useful in treating diabetes or obesity or may be useful in inhibiting apoptosis, thus useful in treating diseases in which apoptosis is involved e.g., mechanical (including heat) tissue injury or ischaemia disease such as stroke, myocardial infarction and neural injury. (V) is useful as an antifungal agent. The present sequence is used in the exemplification of the present invention. a compound for modulating the activity of phosphoinositide dependent protein kinase 1 (PDK1) comprising using molecular modelling means to select or design a compound that is predicted to interact with the protein kinase catalytic domain of PDK1, and selecting a compound that is predicted to interact with the protein kinase catalytic domain. Also predicted to interact with the protein kinase catalytic domain. Also describes a method (M1) for selecting or designing ting the activity of phosphoinositide dependent

The present invention describes a method (M1) for selecting or designing CC a compound for modulating the activity of phosphoinostide dependent CC protein kinase 1 (PDK1) comprising using molecular modelling means to CC select or design a compound that is predicted to interact with the CC predicted to interact with the protein kinase catalytic domain of PDK1, and selecting a compound that is predicted to interact with the protein kinase catalytic domain. Also CC described: (1) selecting or designing (M2) a compound for modulating the CC thirty of a hydrophobic pocket (PIF binding pocket)-containing protein containing a hydrophobic pocket (PIF binding pocket)-containing protein kinase having a hydrophobic pocket (PIF binding pocket)-containing protein containing a hydrophobic pocket (PIF binding pocket)-containing protein containing a hydrophobic pocket (PIF binding pocket)-containing protein containing in the position equivalent to the phosphate binding pocket in the position containing (PIF) and/or Leu155 of full-length human CC pure and further having a phosphate binding pocket in the position containing Lys76, Arg131, Thr148 and/or Gln150; (2) assessing CC mutated protein kinase (I); (4) a polymucleotide (II) encoding (I); (5) a modulates the protein kinase activity of a protein kinase (e.g., pDK1); (CC not call (II) comprising (II); (6) identifying (M4) a compound that (CC modulates the protein kinase activity of a protein kinase (e.g., pDK1); (CC contains mutated at the phosphate binding site, or vice versa; (8) a contain the protein kinase mutated at the phosphate binding site, or vice versa; (8) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ÖS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC (I), (II) in medicine; (10) use of (V), (I), (II) for the manufacture of compound (V), (II) in medicine; (10) use of (V), (II), (II) for the manufacture of composition of the treatment of a patient in need of modulation of composition of the manufacture of composition of the manufacture of composition of the manufacture of the provided in the signalling pathway and/or ppKR/pKR/sGK/pKB/p70 S6 kinase/pRK2/pKC signalling pathway and/or composition of composition of the provided as defined in (M1). (I) has considered in the signalling and (II) a considered in the specific and can be used as a modulator of contribution of protein kinase. (V) is useful for modulating the ability of protein concurring polypeptides, to different substrates, e.g., different naturally concurring polypeptides, to different extents. (V) inhibits or increases the activity of protein kinase. The protein structures e.g., the co-condinates as provided in the specification are useful for designing creagent useful in drug designing assays or characterisation of protein consistent useful in treating cancer. (V) capable of producing the activity of protein consected in the specification are useful in the activity of protein consectivity or regulation. (V) capable of producing the activity of protein consectivity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Identifying AGC protein kinase modulators,

for use in

therapy, comprises

. . . .

.

```
The present invention describes a method (M1) for identifying AGC protein CC kinase (I) modulators, by: (a) providing a polypeptide comprising a CC kinase domain of (I), and associated activation loop which may be CC phosphorylated or unphosphorylated; (b) contacting a test agent (T) and CC phypeptide (B) under conditions conductive to allow kinase activity to be CC detected in absence of (T); and (c) detecting effect of (T) on kinase CC use in (M1); (2) a mutated AGC kinase (III) comprising a mutation in a CC kinase domain and/or activation loop in order to reduce binding ability CC to the hydrophobic motif for use in (M1); (3) a compound/agent (IV) CC identified by (M1) for use in therapy; (4) a phosphorylated peptide CC comprising the sequence F/Y-X-Y-F/Y-F/I in which the S/T residue is CC phosphorylated, and (5) a peptide comprising the sequence F/Y-X-Y-F/Y-F/I in which the S/T residue is CC phosphorylated, and (5) a peptide comprising the sequence F/Y-X-Y-F/Y-F/I cativity, such as an activator or inhibitor of AGC protein kinase CC activity, such as an activator or inhibitor of AGC protein kinase CC activity, such as an activator or inhibitor of AGC protein kinase CC activity, such as an activator or inhibitor of AGC protein kinase CC activity, such as an activator or inhibitor of AGC protein kinase CC inhibits AGC kinase activity is useful or treating diseases associated CC with abnormal cell proliferation or apoptosis, such as cancer, or inhibitory agents. The phosphorylated peptide is useful for modulating CC capable of inhibiting AGC kinase activity, and for designing new CC inhibitory agents. The phosphorylated peptide is useful for modulating CC capable of inhibiting AGC kinase activity, and for designing new CC inhibitory agents. The present sequence represents a protein kinase B CC inhibitory agents. The present sequence expresents a protein kinase B CC inhibits and CC activity. The unphosphorylated hydrophobic motif, which is used in the ccapable of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a sequence which is phosphorylated by protein kinase PDKI. The specification describes a screening method to identify a compound which modulates the activity of protein kinases from different sources, using host yeast cells. The method is used to identify a compound which modulates (inhibits) the activity of a protein kinase. Pkhl or Pkh2 phosphorylate and activate Ypk1, Yrk2, human serum and glucocorticoid induced protein kinase (SGK) or protein kinase B-alpha (PKBalpha). 3-phosphoinositide-dependent protein kinase-1 (PpK1) is used to phosphorylate and activate Pkh1 and Yrk2 or SGK but not PKBalpha or p7056 kinase. Compounds identified by the methods are used to treat tungal infections e.g. thrush, and to treat cancer. To treat cancer, the compounds inhibit PKB, PDK1 or the activation of PKB by PDK1. Compounds which activate PKB or PDK1 can be used in the treatment of diabetes or obesity, and compounds which inhibit a fungal functional homologue of
New protein kinase related to p70S6K pathway enzymes with threonine 389 replaced - by acidic amino acid, has constitutive activity, used to identify potential antiproliferative and immunosuppressant agents, also new dominant negative mutant of this enzyme.
                                                                                                                                                                                                                                                                                                                                             31-OCT-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-MAY-1998

It has the S or T residue homologous to T389 in p7056K replaced by an acidic amino acid which C confers constitutive activity. The new protein kinases are used to identify p7056K kinases responsible for regulation (especially by CC phosphorylation) of the p7056K-related kinase and its direct activation through T229, also to screen for compounds that inhibit kinase activity CC in the p7056K pathway. The protein kinases of the p7056K signalling pathway and to block upstream CC kinases. Mutation of T389 with an acidic amino acid produces a several-ck kinases. Mutation of T389 with an acidic amino acid produces a several-cfold increase in basal kinase activity while retaining susceptibility to activation. Use of the new protein kinases in assays means that the CC signal pathway can be kept active without addition of exogenous mitogens or other activators. The present sequence represents an internal fragment of RAC-PK/Akt alpha containing an S residue at position 6 homologous to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

This invention relates to a new protein kinase, structurally related kinase of the p7056K signalling pathway. It has the S or T residue homologous to T389 in p7056K replaced by an acidic amino acid which confers constitutive activity. The new protein kinases are used to identify p7056K kinases responsible for regulation (especially by
                                                                                                                                                                                                                                 Disclosure; Page 5;
                                                                                                                                                                                                                                                                                                          new dominant negative mutant of this

          the same. The assay if useful for easily, rapidly, accurately and stably determining the activity of purified or unpurified protein kinase IIKI without using a radioactive isotope. A peptide for protein kinase IIKI assay is characterised by having the amino acid sequence of SEQ ID NO: 13, wherein the peptide is selected from the amino acid sequences of SEQ ID NO: 1 to SEQ ID NO: 8; and the peptide is labeled with fluorescence. A method for determining activity of mon-radioactive protein kinase IIKI comprises the steps of: labeling a peptide for protein kinase IIKI assay with fluorescence; reacting the fluorescence-labeled peptide with protein kinase IIKI; subjecting the reacted fluorescence-labeled peptide to electrophoresis to separate phosphorylated and unphosphorylated peptides:
                                                                                                                                                                                                                                                                                                                                                                       Chun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  phosphorylation) of the p70S6K-related kinase and its direct activation through T229, also to screen for compounds that inhibit kinase activity in the p70S6K pathway. The protein kinases of the p70S6K signalling pathway are used to define this signalling pathway and to block upstream kinases. Mutation of T389 with an acidic amino acid produces a several-fold increase in basal kinase activity while retaining susceptibility to activation. Use of the new protein kinases in assays means that the signal pathway can be kept active without addition of exogenous mitogens or other activators. The present sequence represents an internal fragment of RAC-PK/Akt beta containing an S residue at position 6 homologous to

CC of phosphoinositide-dependent protein kinase I (PDKI), by exposing it to CC an interacting polypeptide. Included in the invention are a preparation CC comprising PDKI and an interacting polypeptide, PDKI with altered CC specificity is useful for phosphorylating a residue corresponding to the Ser/Thr residue of a substrate with the following peptide Phe/Tyr-Xaa-Xaa CC -Phe/Tyr-Ser/Thr-Phe/Tyr. Altered PDKI is also used for phosphorylating grotein kinase C related protein kinase 2 (PRK2). The compound identified CC by methods of the invention that are capable of altering the substrate EC specificity of PDKI are useful for manufacturing a medicament for CC treating a patient who is in need of modulation of the insulin signalling CC pathway and/or PDKI, PDK2 or PRK2 signalling. A compound that is capable of reducing the activity (i.e. the PDK1 and/or the PDK2 activity) of PDK1 (CC may be useful in treating cancer. PDK1, e.g. via protein kinase B and/or CC SGK, may be capable of providing a survival signal that protects cells from apoptosis induced in a variety of ways. Reduction of the activity of PDK1 may promote apoptosis and may be useful in treating cancer. CC Conditions in which aiding apoptosis may be benefit may also include cof PDK1 may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity, or may be useful in treating diabetes or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

                                                                                             The present invention relates to detecting addition or removal of a phosphate group to or from a substrate. The method involves conteact luminescent peptide with a binding partner that binds specifically phosphorylated peptide without regard to the particular amino acid sequence of the peptide. The method is useful for detecting phosphorylation and dephosphorylation modifications of proteins, including kinases and phosphatases. The methods can be used to stud kinase activity of different receptors e.g. the insulin receptor and find agonists and antagonists of these receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               damaging processes and in treating disease in which apoptosis is involved. Examples of the diseases include, mechanical (including heat) tissue injury or ischaemic disease, for example stroke and myocardial infarction, or neural injury. The present sequence represents a peptide used to raise phosph-specific antibodies against protein kinase B phosphorylated at Ser 473. The peptide is used in methods to show that PDK1 is responsible for the phosphorylation of PKB
                                                                     Sequence 11
                                                                                                                                                                                                                                                                        Assay for detecting phosphorylation and dephosphorylation modification proteins by contacting luminescence peptide with a binding partner and measuring change in luminescence polarization.
                                                                                                                                                                                                                                                                                                                                     WPI; 2001-091201/10

                                                                                                ligand interacting in vivo with the pocket to regulate the conformation and biological activity of the protein so that the protein will assume a first conformation and a first biological activity upon the ligand-pocket interaction, and will assume a second, different conformation and a biological activity in the absence of the ligand-pocket interaction; providing respective samples of the protein in the first and second conformations; and screening at least one of the samples against one or more candidate molecules by contacting the molecules and one sample, and identifying small molecules which bind with the protein at the region of the pocket in order to regulate the activity of the protein. The method is useful for modulating protein activity and for the identification of new pharmacological compounds and for treatment modalities. The present sequence is one such switch control ligand, which is specific to protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which interact with proteins e.g. enzymes, receptors, or signaling proteins, in order to regulate the activity of the proteins. The methor comprises: identifying a switch control ligand forming a part of the protein; identifying a switch control pocket forming a part of the protein and which interacts with the switch control ligand, where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying molecules that interact with specific naturally occurring proteins for modulating protein activity, comprises identifying molecules that bind with the protein at the region of the pocket to regulate

                                                                                                                                                                                                                            This sequence represents a C-terminal fragment of protein kinase B (PKB). PKB is also known as the protooncogene Akt, and RAC. This sequence was used as an epitope to produce PKB specific antibodies. The use of PKB, its analogues, isoforms, inhibitors, activators and/or functional equivalents for regulating glycogen metabolism and/or protein synthesis is the subject of the invention. This sequence can also be used in a method of the invention for identifying agents that modulate the activity of PKB. It can also be used to screen for modulators of enzymes that catalyse PKB phosphorylation. PKB (an insulin-stimulated crossfide kinase) and its analogues etc. are used to treat disease characterised by abnormal glycogen metabolism and/or protein synthesis, especially type II diabetes and cancer (specifically of breast, pancreas and ovary). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-DEC-1995;

                                                                                                                                                                                                                                    The invention relates to a chimeric protein kinase having an inhibitor binding site comprising amino acid residues of a first protein kinase which bind an inhibitor and residues of a second protein kinase which do not bind the inhibitor. The chimeric protein kinase is useful for identifying inhibitor molecules capable of affecting the activity of first protein kinase, by preparing the chimeric protein kinase, growing a crystal of the chimeric protein kinase, solving the structure of crystal of chimeric protein kinase, using X-ray crystallography methods and using the structure to design inhibitor molecules capable of affecting the activity of the first protein kinase. The structure of the chimeric protein kinase is useful for the rational drug design of inhibitors of non-crystallisable protein kinase. The present sequence represents the amino acid sequence of a protein kinase region near the binding site for sulindac sulphide and PD98059
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel chimeric protein kinase for identifying inhibitor molecules, has inhibitor binding site of first protein kinase which bind to inhibitor and amino acids of second protein kinase which do not bind to inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein kinase; kinase; enzyme; rational drug design; non-crystallisable; sulindac sulphide; PD98059.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6689807

GENERAL INFORMATION:
APPLICANT: Kenneth Walsh
APPLICANT: St. Elizabeth's Medical Center
ITITLE OF INVENTION: HMG COA Reductase Inhibitors for
ITITLE OF INVENTION: Promoting Anglogenesis
FILE REFERENCE: 49,784 (1417)
CURRENT APPLICATION NUMBER: US/09/590,740
CURRENT FILING DATE: 2000-06-08
NUMBER OF SEQ ID NOS: 6
SOFTWARE: FastSEQ for Windows Version 3.0
LENGTH: 417 B US-09-590-740-4
